

Agricultural Representatives, Consultants and Specialists

Agricultural Representatives, Consultants, and Specialists provide expert advice and support to farmers, agribusinesses, and organizations to improve agricultural productivity and sustainability. They analyze farming practices, recommend modern techniques, and help solve problems related to crops, livestock, soil, and resources. Their role is important in enhancing food production, efficiency, and environmental protection.

Duties and Responsibilities (Points):

- Advise farmers on crop production and livestock management
- Recommend modern farming techniques and technologies
- Analyze soil, water, and environmental conditions
- Help control pests, diseases, and weeds
- Develop plans to improve yield and farm efficiency
- Provide guidance on the use of fertilizers and pesticides
- Assist in farm management and business planning
- Conduct research and field studies
- Train and educate farmers and agricultural workers
- Ensure compliance with agricultural laws and safety standards
