

Architecture and Science Managers

Architecture and Science Managers plan, direct, and coordinate activities in architectural and scientific fields. They oversee projects, manage teams of architects, engineers, and scientists, and ensure that work is completed efficiently, within budget, and according to technical standards. Their role combines leadership, technical knowledge, and strategic planning to achieve organizational goals.

Duties and Responsibilities (Points):

- Plan and manage architectural and scientific projects
- Supervise teams of architects, engineers, and scientists
- Set project goals, timelines, and budgets
- Ensure compliance with safety, technical, and legal standards
- Review and approve designs, research, and technical reports
- Coordinate with clients, stakeholders, and other departments
- Allocate resources and manage project costs
- Monitor progress and resolve technical or managerial issues
- Implement new technologies and innovative practices
- Evaluate performance and provide guidance to team members
